

Carestretch™ Nano stretch film

High performance & high strength film

www.lindumpackaging.com

Carestretch™ Nano stretch film

Carestretch™ Nano is a clear choice for efficient machine wrapping. Due to its high strength and stretch capabilities you can significantly reduce the amount of film user per pallet wrapped.

The results for your business? Improved performance and a significant reduction in the amount of film – and plastic – used.

Performance and benefits

- **Nano technology**

Made of 33 individual layers, each nano layer is designed to achieve super thin yet resilient film.

- **Unrivalled stretch**

Carestretch Nano can be stretched up to 400% and at high wrapping speeds.

- **High strength**

The nano layers mean a significantly higher strength film – considerably outperforming standard films.

- **High puncture & tear resistance**

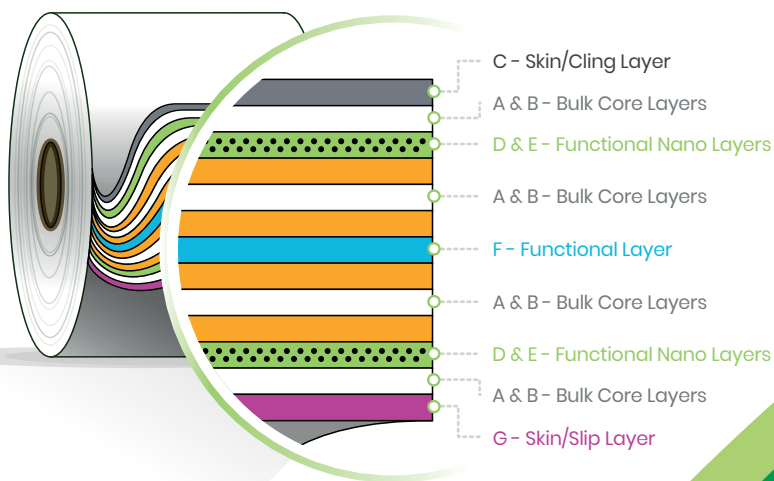

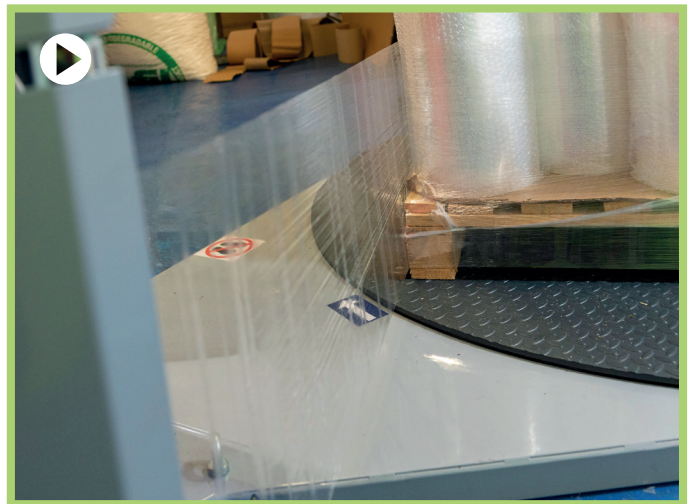

Greater resistance to puncture and tearing, even when used on machines that function at high speeds.

- **Enhances load stability**

Provides an enhanced super strong grip for increased performance and better pallet stability.

- **Plastic reduction & sustainability**

One metre of film can be stretched into an impressive five metres of wrap, substantially reducing the amount of plastic & helping you towards your sustainability goals.

Get in touch to speak with one of our expert team about our nano film, or to order a sample to try the product out for yourself.
