

# Lindum Packaging Company overview

Packed with innovation

# Lindum Packaging

## Packed with innovation

---

On average we save our customers **27% in packaging costs** and **53% less plastic packaging** ”

Working predominantly within the fast-moving consumer goods sector (FMCG) across Europe, our approach to packaging is both holistic and innovative.

### Innovative packaging expertise

Our proven track record of over 22 years' experience in the industry has earned us a reputation as market leading transit packaging experts.

Whether you have a specific business objective in mind, such as cost saving, reducing your plastic packaging waste and minimise movement in transport issues or you'd like to benefit from our expertise in assessing your business's packaging performance - we are here to help.

# Our product range

## Innovative packaging products

---

### Pallet wrap & stretch film

---

Our high-quality range ensures your goods are packaged securely when in transit; moving smoothly through the supply chain. With an extensive range that includes nano, bio-based and recycled content, we have an expert film for you.

---

### Packaging tapes

---

Providing high-quality strength, adhesion and durability, our market leading tapes can help to reduce operator downtime and costs and be used across all environments. Most of the range is solvent free, providing an eco-friendly tape solution.

---

### Pallet wrapping machinery

---

Working in combination with our entire range of stretch films, the machinery we supply will help you with the safe and secure wrapping of your pallets. Whether you require machines for standard or high volume use, we have a machine to suit.

---

### Pallet stability products

---

Our simple, yet effective, range of products to help improve pallet stability, will help you to prevent costly damaged goods in transit. From Caregrip anti-slip liners to corner edge protectors, this range can improve the stability of your pallet loads.

---

## Paper & cardboard

---

Our paper and cardboard ranges offer an eco-friendly, recyclable, and durable solution for your packaging. With a wide range of high-quality, heavy-duty paper and card products, your packaging will be protected without damage to your goods.

---

## Protective & polythene

---

Whether you require bubble wrap, void fill, loosefill or air bags, we can. Whether you need to protect your goods from dust and moisture in storage to damage whilst in transit, we have a wide range of both polythene and protective products to ensure optimum levels of protection for your goods.

---

## Recycled content

---

With sustainability a key factor for many businesses' packaging operations, our innovative recycled content range allows businesses to have the same high quality products and performance, but with the added benefit of 30% recycled content.

---

## Packaging accessories

---

Complementing our expert packaging supplies, we also have a range of accessories to use alongside our products to make packaging easier and more efficient. The benefits mean greater productivity for your packaging operations.

---

# Our services

## To improve your packaging operations

### Packaging audit

Our free packaging audit assesses your transit packaging usage, systems and processes to identify operational savings and optimal practices, making your business more cost efficient and sustainable.

With decades of experience and knowledge, and the latest packaging innovation know-how, our packaging specialists have identified considerable savings for a wide range of clients.

### Mobile pallet stability test lab

Our mobile pallet stability test lab not only helps to improve pallet stability but will also eliminate the hidden costs associated with movement in transport too.

With live footage capture the test lab identifies weak points in your packed pallets and offers immediate feedback to enable adjustments, retests and suggested improvements that have a big impact.

### Carbon offset programme

Our two-step scheme firstly helps you to minimise as much CO<sub>2</sub> within your packaging operations as possible. By assessing your current practices and products, and suggesting more sustainable product options, and minimise plastic usage, we can minimise the CO<sub>2</sub> in your packaging.

Next, we'll reduce the balance of CO<sub>2</sub> further by offsetting the rest – helping you get closer to carbon neutral packaging.

## Plastic reduction

Reducing plastic packaging waste, and its associated carbon footprint, is a hot topic for businesses that are looking to meet their sustainability goals. Transit packaging is an area that can easily be overlooked, and that's where we come in.

Through an innovative approach to packaging, we can help to optimise processes and products which can help minimise and reduce the amount of plastic across your packaging operations.

## Improve pallet stability

Unstable pallets can have an immeasurable costly impact on your business. Costs from interrupting the production process, damage to goods, labour costs of repacking, as well as customer satisfaction and the human health and safety cost.

We offer a thorough analysis of your pallet stability in order to improve stability and performance in the long term, remove hidden costs and avoid temporary fixes of overusing packaging products to increase stability.

## Cost saving

Our packaging experts save businesses on average XX% cost saving within their packaging operations. By looking at existing processes and products, our team can recommend improvements that will save your business money.

We'll identify the right products for your specific operations, optimise wherever needed in your processes, whilst helping you to reduce the plastic usage and increasing efficiency of your business.
